

Hiyoshi International Internship Program - 2026 for Indian Nationals College/University Students

We warmly welcome you all to the Hiyoshi International Internship Program 2026 for Indian Nationals College/ University Students. We warmly welcome you all to the International Internship Program 2026, open only to Indian nationals who are college or university students."

Based on the idea of "There is no border to Environmental issue", we have devoted ourselves in accepting many trainees and interns from Asia and other countries for more than 25 years. We have accepted more than 200 trainees and interns. Hiyoshi started this International Internship Program for the young students to give them an opportunity to increase their environmental awareness and knowledge because they will be the next generation. Environmental technical skills acquired at Hiyoshi are able to bring back those skills in their country and thereby contribute to improving their Environment. Hiyoshi also wishes to expose them to the Japanese working environment and culture and broaden their experience for their future career. We also hope to have an exchange of technical/business knowledge and language skills.

正鈴木

President,
Hiyoshi Corporation, Japan

About HIYOSHI

Hiyoshi Corporation is located in Shiga, Japan. Hiyoshi was inaugurated in 1955 for the collection of domestic and human wastes, water and sewage maintenance and other living facilities, environmental analysis and a research company. 50 years since then, we have now looked into global environmental problems and intensely expanded our business into more advanced chemical analysis such as asbestos and food analysis and other analysis for human health and safety with the spirit of "Think of Ecology". As our motto, "No company can exist without social contribution, and with its technical competence the company can accomplish such contribution", it is not too much to say that our work stands on accreditations. Furthermore, we recognize that Social Contribution is also our mission. We provide environmental education to children of next generation, and we also provide our expert techniques and knowledge to the world. 21st century is the "Century of the Environment", to pass on the prodigality of nature and to ensure a sustainable future for the next generation.
